Reds Fire 6 Missiles Of Intercontinental Range Over Siberia

By Marquis Childs ...

As has been established beyond doubt by a top committee of technical intelligence experts, Soviet Russia fired an intercontinental ballistic missile at least six weeks ago and not immediately prior to the announcement that came with dramatic suddenness earlier this week.

The Technical Intelligence Review Committee has established that the Soviets successfully fired not one, but six long-range missiles. The series of test firings are believed to have occurred over a period of several weeks beginning perhaps two months ago.

The test shots were fired on a range of 4500 to 5000 miles in length, established in Northern Russia and Siberia. Establishment of this range followed successful tests more than a year ago of intermediate missiles on a shorter test range. The intermediate missiles are now reported to be in full produc-

The Soviet muscle-flexing cold war is any tendency toward isolationism in with the ICBM may in part be a sort of offset the American response. It is of course essential American military men about how Russia could as soon as possible as part of the over-all military be pulverized by weapons from this country or sectorized. But the ICEM is essentially an isolaoverseas bases.

in London probably had little or nothing to do with this change. The Soviet delegate, Mr. Zorin. has accused the West and particularly the United States of trying to make propaganda out of the talks-which is precisely what the Soviet Union has been doing. Seemingly the Russians have concluded that there is almost no chance of agreement at London even on suspension of nuclear weapons tests, and hence they are not even listening to Western proposals. Modifications in these proposals have come late, but they have gone a long way toward meeting Soviet objections. The Russians, however, evidently expect at least a temporary breakdown. They may, itsleed, have intended their ICBM announcement to improve their bargaining position at future meetings.

None of this is an indication that Russia is bent on war. On the contrary, Mr. Khrushchev and Marshal Zhokov appear to have comprehended

the awful possibility of mutual nuclear annihilation. What they seem to have decided is that for the moment there would be no gain in accom-Plainly the Soviet Union has decided upon a modation with the West. It is a plausible inference that Mr. Khrushchev As Marguis Childs relates today, the United States has been experiencing so much trouble in con-solidating his power at home that he must make missily tosis. Whether or not this information a show of strength abroad. The harder Soviet should in the made public earlier, the fact line thus can be a combination of diversion from that it was obtained is significant. It testifies to internal difficulties and appeasement of the more the prowess of American intelligence, and it may rigid factions, notably the army, that hold a mort- well indicate further that the United States has gage on Mr. Khrushchev. Perhaps the change perfected long-range radar that can detect the re-

to the occasional unfortunate braggadocio by to produce an American intercontinental missile tionist weapon, and it ought not to be emphasized The Western position at the arms-control talks to the detriment of other missiles and rounded military capability. One immediate counter to the Soviet ICBM, for example, is the ability to fire intermediate-range missiles from the overseas bases which Russia condemns so loudly. There are two lessons here. One is that this country's alliances have become more, not less Important. The other is that the confusion over service prerogatives in intermediate-range missile development and production ought to be ended forthwith.

> The new Soviet cold war tactic will succeed only if we and our allies fail to move together, What is imperative is recognition that the Soviet Union is employing a combination of military, political and economic techniques all over the world to achieve its ends. The West requires no less an integration of its own strategy, and wase use of economic and political power is just as necessary an element as additions to military DOWE".

Reds Zoom Ahead In Missile Race

By Stewart Alsop

'S THE SOVIET model of an intercontinental ballistic missile truly operational? That is, is it a weapon capable of being used in war, rather than a

mere prototype? And if it is operational, is at sufficiently advanced for the Soviets to freeze on the model, as is their invariable custom when they are satisfied with a weapon, and proceed to mass-produce it?

Behind the bland mask of complacency

which the Eisenhower Stewart Alsop Administration has assumed for public purposes, these are the key questions. which the Government's intelligence experts and policy makers are anxiously asking. They are quite genuinely lifeand death questions. They cannot be answered with assurance. Yet they tell a lot about the real meaning of the latest Soviet ICBM test.

For the first thing to understand about the Soviet test is that it was not something new, or unexpected. .

The American Government has been aware of Soviet progress throughout, though the Administration has chosen to conceal it from the American people. The details of how the Government has known are of course properly secret. But certain obvious facts are public property-that radar is a line-of-sight instrument of theoretically unlimited range; and that ballistic missiles reach an altitude of hundreds of miles at the highest point in their trajectory, and are thus subject to radar detection at great range.

THE SOVIETS' first prototype test of their ICBM was roughly comparable to the Air Force test of the American Atlas ICBM in April, with the difference that the Atlas test failed while the Soviet test succeeded. As Uns reporter pointed out in reporting the Soviet test: "There is a long, difficult road to travel between the first test firing of a prototype missile and the achievement of an operational anapons:

system.'

How far have the Soviets now traveled along that road? Part of the answer, at least, is suggested by a comparison between the Soviet claims for their ICBM model and the known characteristics of Atlas, which is at the present stage in no sense & weapon for use in war, but a research test vehicle.

The Soviets claim their model is. a "multi-stage ballistic rocket," whereas the Atlas model unsuccessfully fired last spring consisted only of the huge initial-stage rocket. The Soviet model is "intercontinental;" and the "results obtained show that it is possible to direct rockets to any part of the world." The Atlas model fired last spring was designed to fly only about 3000 miles. Finally, "the rocket landed in the target area," whereas the Atlas test prototype was not expected or designed to achieve any degree of accuracy.

The Soviet claims for their model are certainly vague, and designedly so. But in the past, Soviet claims have tended actually to understate Soviet achievements in the air-atomic field. Some experts, noting this fact, believe on the basis of the Soviet claims and other evidence that the Soviets already have an operational weapon ready for mass,

production.

Others believe, or hope, that more tests must be made, and more time nust elapse, before the Soviets can gt into quantity production.

"I HAD THOUGHT they were about a year ahead of us," one expert has re-marked, "but now it looks more like two years." Despite the official complacency, it is well to understand what it could mean if this estimate is correct. For suppose the Soviets achieve a fully operational ICBM system two years before this country achieves a comparable

aystem. They will then be able to threaten, not only American cities, but the system of Strategic Air Force bases, whose location is well known, with instant destruction. They could thus threaten to weaken decisively, or even eliminate entirely, the American retaliatory power which is the only real shield of the free world. No one can predict whether in such circumstances the Soviets might actually launch a surprise attack. But it is not hard to predict that the Soviets would take every advantage of the obvious opportunity to blackmail the United States into accepting a super-Munich.

In these circumstances, it is simply incomprehensible that the Eisenhower Administration has chosen to tell the American people not to worry, and that everything is going to be all right.
